# Notes Meeting II

- Start Spring retrospective.

- We just need 2 microservices overall.

- Meeting in week 2.5.

- Rename Authentication as User microservice.

- The current architecture about pricing is not scalable, for example for the coupons, which depends on a combination of the products.

- We can have 2-4 microservices.

- Remember that, for example, you could scale product microservice by selling other products.

- Our progress is efficient.

- Start coding, especially on the MUSTs.

- Too many MUSTS. Move some to SHOULD or COULD.

- Missing the None-functional requirements.

- Make sure of more labels.

- Add milestones for every sprint.

- Add time tracking.

- Everything, agendas, etc., goes in GitLab.

- Document about planning (which milestones?), retrospective (progress on the tasks), reflection (what went well, bad? What should be improved?), per sprint.

- Important code quality for the grade. Make some mistakes for the refactoring assignment.

- Make Merge requests, review them. Everyone must have done some review.

- Code of Conduct is really nice.

- The main branch must be updated at least once per sprint. They will run Git Inspector on it (to check everyone have done something).

- TA will send a file about assignment files. Make sure to add it to the GitLab repository.

- Use GitLab a lot! Make sure to do something every week!

- TA will send more feedback about requirements after the meeting.

- Remember to add to the agenda asking the TA for feedback.
