Notes

- Use Mattermost, but can (unofficially) use Discord. Send discord link to TA through Mattermost.

- TA cannot be available 24/7. But we can message her except weekends and not late at night.

- TA is free on Wednesdays. So probably she will answer that day. Try to ask through Mattermost group channel (if you aren't sending personal messages).

- Question: Labs week 5 and 6. It's up to us to have a meeting at week 6 (as it's the week before Christmas). Not mandatory. In week 5 it is the midterm week, so also not mandatory.

- Up to us to organize meetings, at least 24 hours before. Write down the question on the agenda and send her it at least before 24 hours. Always send an agenda.

- Assign a note taker and chairman every week. Can be anyone as long as there is someone.

- Contribution needs to be evenly, and contribute to every part of the project.

- Everyone should be aware of the whole project, at least conceptually. Understand what happens in the different microservices.

- The report needs to be written by everyone, not only one person.

- Talk about workload distribution, deadlines, etc.

- We are talking about the infrastructure.

- 2nd December deadline of first draft of the software infrastructure. TA will give us feedback.

- There will be a template (never? 😆). Some Spring Security things are done. May be confusing.

- Set a CI/CD pipeline.

- Suggestion: Creating a code of conduct. Not mandatory, but useful. Include everything you may agree on.

- Have a look at Assignment 1. Deadline is the 16th of the December.

- Working Prototype deadline is 23rd of December.

- Assignment 2 (deadline: 18th Jan) is about refactoring and Assignment 3 (deadline: 25th Jan) is testing.

- Remember SEM is required for the SP 😊
